 - Understood how to organize content into sections like About, Skills, and Contact.
 - Developed a basic personal portfolio website.
-

Theory Concept in Brief

HTML (HyperText Markup Language) is used to create the basic structure of web pages using elements such as headings, paragraphs, images, and links. CSS (Cascading Style Sheets) is used to enhance the appearance of the webpage by applying colours, fonts, spacing, alignment, and layout design.

In this project, HTML provides the content structure of the portfolio, while CSS improves visual presentation and user experience. Bootstrap CDN may be used to make the page responsive and visually appealing with pre-designed components.
