

Assignment-3

Assignment Title - Design a Dynamic Web Application for a Fashion Store / E-Commerce Product Website using HTML, CSS & JavaScript with Bootstrap CDN

Name – *Malhar Kadam*

PRN – *123B1B155*

DIV - C

Objectives

- To design and develop a dynamic e-commerce web application.
- To implement webpage structure using HTML.
- To style the application using CSS and Bootstrap.
- To add interactivity and dynamic behavior using JavaScript.
- To create features like product listing, cart, and user interaction.

Outcomes

- Learned to design responsive and interactive web pages.
- Gained knowledge of DOM manipulation using JavaScript.
- Understood how to handle events such as clicks, add-to-cart, and filters.
- Developed skills in building real-world e-commerce interfaces.
- Improved understanding of frontend web development concepts.

Theory

A **web application** is a software application that runs in a web browser and allows users to interact dynamically with the system. Unlike static websites, dynamic web apps update content automatically based on user actions without reloading the page.

HTML (HyperText Markup Language) is used to create the structure of the application such as product cards, navigation bar, cart section, forms, and buttons. It defines how content is organized on the webpage.

CSS (Cascading Style Sheets) is used to enhance the visual appearance of the website. It controls layout, colors, fonts, spacing, animations, and responsiveness. A well-designed UI improves user experience and makes the website attractive.

JavaScript adds dynamic functionality to the web app. It allows:

- Adding products to cart
- Removing items
- Calculating total price
- Filtering or searching products
- Handling user events and interactions

JavaScript works with the **DOM (Document Object Model)** to modify webpage content in real time without refreshing the page.

Bootstrap CDN is used to create responsive layouts easily using its grid system and ready-made components like cards, buttons, navbar, forms, and modals. It ensures that the application works properly on mobiles, tablets, and desktops.

In an **e-commerce or fashion store application**, features such as product display, shopping cart, price calculation, and user-friendly navigation simulate a real online shopping experience. This helps students understand practical implementation of frontend technologies.

Conclusion –

This assignment helped in understanding how to develop a dynamic and responsive web application using HTML, CSS, and JavaScript. It provided practical experience in creating an e-commerce interface with interactive features like product listing and cart management. Overall, it improved frontend development skills and knowledge of real-world web application design.
